1 OFFICE CLOSURE-CHRISTMAS AND NEW YEAR

The NICNAS office at 334-336 Illawarra Rd Marrickville NSW 2204 will be closed from Monday 26 December 2005 and re-open on Tuesday 3 January 2006. No staff will be on site during this time.

NICNAS staff would like to wish you all a safe and enjoyable festive season.

2 AMENDMENTS TO NEW CHEMICAL REPORTS

STD/1116 Ethene, ethoxy-, polymer with 1-(ethenyloxy)-2-methylpropane, hydrogenated (PVE)

The Director of NICNAS approves the following modifications of the chemical name and CAS No. for Ethene, ethoxy-, polymer with 1-(ethenyloxy)-2-methylpropane, hydrogenated (PVE) (NICNAS Reference No. STD/1116, Certificate No. 001920),

The following amendments will be made in the Full Public Report:

1. Replace Ethene, ethoxy-, polymer with 1-(ethenyloxy)-2-methylpropane, hydrogenated (PVE) with Propane, 1-(ethenyloxy)-2-methyl-, polymer with ethoxyethene on the following pages (sections were relevant)
Page 1, 3, (titles)
Page 3 (Section 2)
2. Replace CAS No. 167257-58-1 with CAS No. 30399-62-3 on the following pages (sections were relevant):
Page 3 (Section 2)

The following amendments will be made in the Summary Report:

1. Replace Ethene, ethoxy-, polymer with 1-(ethenyloxy)-2-methylpropane, hydrogenated (PVE) with Propane, 1-(ethenyloxy)-2-methyl-, polymer with ethoxyethene on the following pages (sections were relevant)
Page 1, 2, (titles)

3 NEW CHEMICALS NOTICE

LOW VOLUME EXEMPTIONS

This notice relates only to Cosmetic and Non-Cosmetic Low Volume Exemptions. A new chemical can be introduced as a low volume exemption under Section 21(6) of the *Industrial Chemical (Notification and Assessment) Act 1989*.

The criteria for Low Volume Exemptions are outlined in the NICNAS Handbook for Notifiers section 2.5.

Cosmetic Exemptions

Exemption	Volume or concentration restriction	Other criteria	Advice required prior to introduction	Other reporting requirements
Cosmetic (<1%)	Introduced at 1% or less	Yes	No	Annual reporting*
Cosmetic (no unreasonable risk)	Not more than 10 kg in each period of 12 months	Yes	No	Annual reporting*
Cosmetic but (no unreasonable risk)	Greater than 10kg but not exceeding 100kg in each period of 12 months	Yes	Yes-Form-15	Annual reporting*

* The person who introduces the chemical must keep in writing, for 5 years after the introduction, information available to the person about occupational health and safety, public health and the environmental effects of the chemical (refer to Chapter 15 of the Handbook for Notifiers for information on annual reporting requirements).

Advice to NICNAS on Cosmetic Exemptions (no unreasonable risk, greater than 10 kg less than 100 kg) is required **prior** to introduction. Form 15 should be sent to NICNAS and acknowledgment of your advice to introduce will be sent within approximately 10 working days. Introducers must keep relevant records pertaining to occupational health and safety, public health and environmental effects of the chemical in writing for 5 years after the introduction. Introducers should also submit an annual report on these chemicals to NICNAS before or on 28 September of the following registration year.

Non-Cosmetic Exemptions

Exemption	Volume or concentration restriction	Other criteria	Advice required prior to introduction	Other reporting requirements
Non-Cosmetic (no unreasonable risk)	Not exceeding 100 kg in each period of 12 months	Yes	No	Annual reporting*

* The person who introduces the chemical must keep in writing, for 5 years after the introduction, information available to the person about occupational health and safety, public health and the environmental effects of the chemical (refer to Chapter 15 of the Handbook for Notifiers for information on annual reporting requirements).

Form 21-4a-NCE has been replaced with a template (NCE-1) and guidance document (NCE-guidance) for introducers of new chemicals to use to assist them in determining no unreasonable risk. The guidance document (NCE-guidance) contains a list of important

factors and examples to consider in determining no unreasonable risk. NICNAS strongly recommends that industry utilize the template NCE-1 as a means of industry conducting adequate analysis of “no unreasonable risk”. Further information on determining no unreasonable risk can be found in Chapters 2.5 and 2.6 of the NICNAS Handbook for Notifiers. Some chemicals will be unsuitable for exemption and a list of criteria for unsuitable chemicals can be found at the end of Chapter 2.6 in the NICNAS Handbook for Notifiers.

Advice to NICNAS on Non-Cosmetic Exemptions before introduction is not required. However, you can send the template (NCE-1) form in for data entry purposes in relation to annual reporting obligations. Introducers must keep relevant records pertaining to occupational health and safety, public health and environmental effects of the chemical in writing for 5 years after the introduction. Introducers should also submit an annual report on these chemicals to NICNAS before or on 28 September of the following registration year.

Auditing

Please note that introducers utilizing cosmetic and/or non-cosmetic low volume exemption provisions may be subject to auditing by NICNAS.

Annual Reporting

Web based annual reporting is expected to be available from January 2005 and NICNAS will advise those introducers enrolled for reporting on the 2004/2005 registration year when the reporting portal becomes available.

For further information contact:

NCE guidance:	Jennifer Turner	Ph: 02 8577 8847 email: jennifer.turner@nicnas.gov.au
Annual reporting:	Lewis Norman	Ph: 02 8577 8854 email: lewis.norman@nicnas.gov.au

4 NEW CHEMICALS NOTICE

RENEWAL OF PERMITS – FREQUENTLY ASKED QUESTIONS

Commercial Evaluation Permits and Low Volume Chemical Permits were introduced under the *Industrial Chemical (Notification and Assessment) Act 1989*. Commercial Evaluation Permits (CEC) can remain in effect for up to two years from the date of issue and Low Volume Chemical (LVC) for up to three years from the date of issue.

Existing CEC and LVC permits can be renewed provided certain conditions are met. For a full list of the conditions that must be met see Section 21B and Section 21R of the *Act* for CEC and LVC permit renewals respectively.

The CEC and LVC permit renewal is a new category that allows existing permit holders to renew their permits provided the existing permit is current and the function or use has not changed and is not likely to change significantly. A full list of conditions for CEC and LVC that must be met is outlined in the Handbook for Notifiers, Section II (6.6). Lodging a permit renewal can result in significant financial savings of \$2475. A CEC or LVC permit renewal costs only \$609.

There has been some confusion recently about *how* and *when* to apply for a permit renewal. This notice has been designed to answer some of the common questions regarding permit renewals. **This advice does not apply to Early Introduction Permits.**

How do I renew my CEC or LVC permit?

Renewal forms are available from the NICNAS website at http://www.nicnas.gov.au/Forms/New_Chemicals.asp just follow the links to the appropriate category.

When should I lodge my renewal form?

Your renewal form should be lodged no earlier than three months and no later than two weeks before the current permit expires.

Can I lodge a permit renewal if the permit has expired?

If the permit has already expired you will need to submit a new application. Permit renewals are only valid where the original permit has not expired.

How many times can I renew my permit?

Commercial Evaluation Permits may only be renewed once. Low Volume Permits may be renewed any number of times.

Do I need to include Form 3 – Exempt Information in my Permit Renewal?

You do not need to resubmit Form 3 – Exempt Information if it was in the original permit submission. However, you may submit a new Form 3 – Exempt Information for information that was not claimed as exempt in the original application.

Can my renewal contain new joint notifiers?

No. Only if the joint notifiers were part of the original submission then you may include them in the renewal process. If you wish to add a joint notifier not in the original submission you must lodge a new permit application.

What are my obligations?

The permit carries conditions, which must be met by the holders of the permit. A complete list of conditions relating to a permit can be found on the reverse side of an issued permit. Holders of a permit are required to complete annual reporting under subsection 21AA of the Act. Holders of a permit are also required to report any adverse occupational health and safety, public health and environmental effects to the Director as soon as possible. Penalties apply for failing to meet the obligations.

5 NEW CHEMICALS NOTICE

LODGING PERMIT APPLICATIONS USING THE E-TEMPLATE

Notifiers are encouraged to use the new electronic templates with inbuilt guidance for submitting Commercial Evaluation Permits and Low Volume Permits. The use of these forms will expedite the assessment process. The electronic templates (e-templates) can be found on the NICNAS website http://www.nicnas.gov.au/Forms/New_Chemicals.asp.

6 NEW CHEMICALS NOTICE

NEW SELF-ASSESSMENT PLC TEMPLATE

A new Self-Assessment Polymer of Low Concern (SAPLC) Form 1, including the self-assessment report template, is now available for download from the Forms section of the NICNAS website.

The flow of the template has been improved, to make risk assessment more straightforward, and the new Exempt Information section makes it easier to claim confidential information.

The website http://www.nicnas.gov.au/Forms/New_Chemicals/Self_Assessment.asp has detailed guidance on these new features, and updates of existing guidance material.

7 NEW CHEMICALS NOTICES

EARLY NON-CONFIDENTIAL LISTING ON AICS

If you are a current certificate holder of an assessment certificate and wish to list your assessed new chemical on the non confidential section of the Australian Inventory of Chemical Substances (AICS) before five years, you can submit a request to NICNAS for early listing. This means that the new chemical immediately becomes an existing chemical and other importers and/or manufacturers may introduce the chemical.

If someone else is holding an assessment certificate for the same chemical you applied for, NICNAS will write to each holder informing them of the proposed inclusion and whether they agree with the early listing.

There is no fee for early listing if the application is made within 28 days of the certificate being granted.

In addition, currently holders of certificates issued before August 2004 (before early listing was introduced) can lodge an application for early listing at no charge. **This amnesty period will cease on 28 February 2006** (this Notice supersedes our statement in the August special *Chemical Gazette* 2004 which indicated that holders of existing certificates ie before August 2004 will not be required to pay for immediate listing).

From 1 March 2006, all holders of assessment certificates submitting an application for early listing will be required to pay \$607 (early listing fee) unless the application is received within 28 days of the certificate issue date.

To apply for early listing on the non confidential section of AICS, an application form (Form AICS-2) is available in the Forms section of the NICNAS website <http://www.nicnas.gov.au/Forms/AICS.asp>.

8 NEW CHEMICALS NOTICES

SCREENING NEW CHEMICALS SUBMISSIONS

NICNAS has recently introduced new changes to its screening procedures of new chemicals applications. The changes are aimed at reducing the number of notifications that do not progress to the assessment stage leading to extended delays before completion of the assessment. Upon receipt of the application, administrative screening is carried out to check if the correct forms and fees are provided. Technical screening involves checking the data provided with the notification against the data requirements outlined in the Handbook for Notifiers for the relevant assessment category.

Our screening letters have been changed to introduce timelines for addressing outstanding actions. The notifier will have the option of submitting the data within 28 days timeframe or to submit a timetable agreeable by NICNAS. As part of our standard operating procedure, where the application is not progressing, NICNAS will inform the notifiers of the developments regarding the application (Form 1 has been updated to include company contact).

During 2005-06 NICNAS will hold consultations with an industry focus group to discuss the issues encountered during screening and strategies for progressing new chemicals applications. This work will also assist NICNAS in identifying specific areas for inclusion in the training program for new chemicals notifiers.

The focus group will consider options aimed at enhancing the screening framework including introduction of a non refundable screening fee for applications that fail to progress beyond the screening stage.

9 REGULATIONS RESTRICTING THE INTRODUCTION AND EXPORT OF TETRAMETHYL LEAD AND TETRAETHYL LEAD

Australia is a party to the Rotterdam Convention on the Prior Informed Consent Procedure for Certain Hazardous Chemicals and Pesticides in International Trade (Convention). NICNAS is responsible for implementing, for industrial chemicals, the obligations of the Convention.

To meet Australia's obligations under the Convention, regulations effective from 17 November 2005 introduce import/manufacture and export controls for tetraethyl lead (TEL) and tetramethyl lead (TML). Introduction (i.e. import/manufacture) and export of TML is prohibited without the prior written permission of the Director, NICNAS. Similarly, the export of TEL is prohibited without the prior written permission of the Director, NICNAS. Tetraethyl lead may be introduced without the prior written permission of the Director (NICNAS) if the importation occurs in aviation gasoline or for the production of aviation gasoline; or in leaded fuel and fuel additives introduced by a person granted an approval under the *Fuel Quality Standards Act 2000* for use specified in the approval. These new prohibitions can be found in *Industrial Chemicals (Notification and Assessment) Amendment Regulations 2005 (No. 2)*.

As a Party to the Convention, Australia must ensure that the chemicals listed in Annex III of the Rotterdam Convention are not exported to countries that do not wish to receive them. Annex III contains chemicals that have been notified as severely restricted or banned due to health or environmental reasons by participating countries. Tetramethyl lead and tetraethyl lead were added to Annex III effective 1 February 2005.

For further information or assistance please contact Mr Lewis Norman (ph (02) 8577 8854 or fax (02) 8577 8888 or email: lewis.norman@nicnas.gov.au).

**10 HAZARDOUS FLAME RETARDANTS REMOVED FROM THE
AUSTRALIAN INVENTORY OF CHEMICAL SUBSTANCES
REGULATIONS RESTRICTING INTRODUCTION**

NICNAS has taken action on flame retardant chemicals, octabromobiphenyl (CAS No. 27858-07-7) and decabromobiphenyl (CAS No. 13654-09-6), listed in Annex III of the Rotterdam Convention on the Prior Informed Consent Procedure for Certain Hazardous Chemicals and Pesticides in International Trade (Rotterdam Convention), to which Australia is a signatory. Annex III contains chemicals that have been notified as severely restricted or banned due to health or environmental reasons by other countries participating in the Rotterdam Convention.

Octabromobiphenyl and decabromobiphenyl were declared Priority Existing Chemicals (PECs) on 6 July 2004 to determine extent of use in Australia. While octabromobiphenyl and decabromobiphenyl have been Priority Existing Chemicals (PECs) for 12 months applications for assessment have not been received. This indicates that these chemicals are not imported into or manufactured in Australia. Therefore, as per section 63 of the *Industrial Chemicals (Notification and Assessment) Act 1989* (the Act) the Director, NICNAS, has removed octabromobiphenyl and decabromobiphenyl from the Australian Inventory of Chemical Substances (AICS). Regulations effective 17 November 2005 prohibit the introduction (i.e. importation or manufacture) of octabromobiphenyl or decabromobiphenyl without the prior written permission of the Director, NICNAS. These new prohibitions can be found in *Industrial Chemicals (Notification and Assessment) Amendment Regulations 2005 (No. 2)*. Export controls for these chemicals were put in place effective August 2004.

For further information or assistance please contact Mr Lewis Norman (ph (02) 8577 8854 or fax (02) 8577 8888 or email: lewis.norman@nicnas.gov.au).

11 PROPOSED ACTIVITY ON NANOMATERIALS

NICNAS is proposing to establish an inventory of current uses and applications of nanomaterials in industrial and domestic chemical products that are imported and/or manufactured in Australia. This will assist in prioritising those nanomaterials that may require additional safety testing and/or regulatory controls.

Nanomaterials are materials designed at the molecular level whose small size (< 100 nanometers) and unique properties are being utilized in specialist applications by industry, including the chemical industry.

Nanomaterials are currently of regulatory interest due to potential environmental and/or health impacts. This reflects the nature of nanomaterials in that they are significantly smaller than 'conventional' chemicals and may have increased capacity to be absorbed, have a greater surface area and may have increased reactivity.

A 'Call for Information' for nanomaterials will be published in the February *Chemical Gazette*. This will enable outcomes of the OECD workshop on the Safety of Manufactured Nanomaterials, which will take place in Washington in December 2005, to be taken into account in determining how to define 'nanomaterials' and what information will be required.

Please note that nanomaterials used as sunscreen/UV filters are regulated by the Therapeutic Goods Administration and will therefore not be subject to the Call for Information notice.

12 NOTICE OF WITHHOLDING OF THE PUBLICATION OF THE ASSESSMENT REPORT ON FORMALDEHYDE

The industrial chemical, Formaldehyde, has been assessed as a priority existing chemical (PEC) under the *Commonwealth Industrial Chemicals (Notification and Assessment) Act, 1989* (the Act), as amended.

The publication of the assessment report has been withheld due to the lodging of applications for review in the Administrative Appeal Tribunal (AAT) for review of the decisions made by the NICNAS Director on the variation requests to the draft assessment report.

14 PUBLICATION SUMMARY REPORT

Polymer in Mirapol Surf S500 Summary Report Reference No: LTD/1200

Rhodia Australia Pty Ltd (ABN 24 050 029 000) of 352 Ferntree Gully Road, Notting Hill VIC 3168 has submitted a limited notification statement in support of their application for an assessment certificate for Polymer in Mirapol Surf S500. The notified polymer is intended to be used as an ingredient in a hard surface cleaner, such as a toilet bowl cleaner. Formulation of the hard surface cleaner products will occur in NSW. Up to 3 tonnes of the notified polymer will be imported per annum for each of the first five years.

ASSESSMENT OF PUBLIC, OCCUPATIONAL HEALTH AND SAFETY AND ENVIRONMENTAL EFFECTS

Hazard Assessment

Based on the available data, the notified polymer is classified as a hazardous substance in accordance with the NOHSC *Approved Criteria for Classifying Hazardous Substances*. The classification and labelling details are:

- R43 May cause sensitisation by skin contact

The notified polymer is only introduced into Australia in a mixture. Based on the available data, this mixture is not classified as a hazardous substance in accordance with the NOHSC *Approved Criteria for Classifying Hazardous Substances*.

Occupational Health and Safety

There is Low Concern to occupational health and safety under the conditions of the occupational settings described.

Public Health

There is No Significant Concern to public health when used in the proposed manner.

Environmental Effects

On the basis of the PEC/PNEC ratio, the chemical is not considered to pose a risk to the environment based on its reported use pattern.

RECOMMENDATIONS

Regulatory Controls

Hazard Classification and Labelling

- The ASCC Chemicals Standards Sub-committee should consider the following health hazard classification for the notified polymer:
 - R43 May cause sensitisation by skin contact
 - S24 Avoid contact with skin
 - S37 Wear suitable gloves

- Use the following risk phrases for products/mixtures containing the notified polymer (unless the product/mixture has been tested for its sensitisation potential as a whole):
 - Conc >1%: R43 May cause sensitisation by skin contact

Control Measures

Occupational Health and Safety

- Employers should implement the following safe work practices to minimise occupational exposure during handling of the notified polymer as introduced:
 - Avoid contact with skin
- Employers should ensure that the following personal protective equipment is used by workers to minimise occupational exposure to the notified polymer as introduced:
 - Impervious gloves

Guidance in selection of personal protective equipment can be obtained from Australian, Australian/New Zealand or other approved standards.

- A copy of the MSDS should be easily accessible to employees.
- If products and mixtures containing the notified polymer are classified as hazardous to health in accordance with the NOHSC *Approved Criteria for Classifying Hazardous Substances*, workplace practices and control procedures consistent with provisions of State and Territory hazardous substances legislation must be in operation.

Environment

- The following control measures should be implemented by the reformulator to minimise environmental exposure during formulation of the notified polymer:
 - All process areas should be bunded with drains going to the on-site treatment plant.

Disposal

- The notified polymer should be disposed of by landfill.

Emergency procedures

- Spills/release of the notified polymer should be handled by containment with absorbent material and then placed in a sealable labelled container and disposed of to landfill.

Secondary Notification

The Director of Chemicals Notification and Assessment must be notified in writing within 28 days by the notifier, other importer or manufacturer:

Under Section 64(1) of the Act; if

- the notified polymer is introduced into Australia in products other than Mirapol Surf S500

or

Under Section 64(2) of the Act:

- if any of the circumstances listed in the subsection arise.

The Director will then decide whether secondary notification is required.

15 PUBLICATION SUMMARY REPORT

**UVT 1876
Summary Report
Reference No: LTD/1205**

Fujifilm Australia Pty Ltd (ABN 80 000 064 433) of 114 Old Pittwater Road Brookvale NSW 2100 has submitted a limited notification statement in support of their application for an assessment certificate for UVT 1876. The notified chemical will be imported as an ingredient (<3%) in fully formulated photographic developers for use in the photofinishing industry. Up to one tonne of the notified chemical will be imported per annum for each of the first five years.

ASSESSMENT OF PUBLIC, OCCUPATIONAL HEALTH AND SAFETY AND ENVIRONMENTAL EFFECTS**Hazard Assessment**

Based on the available data the notified chemical is not classified as hazardous under the NOHSC *Approved Criteria for Classifying Hazardous Substances*.

Occupational Health and Safety

There is Low Concern to occupational health and safety under the conditions of the occupational settings described.

Public Health

There is Negligible Concern to public health when used in the proposed manner.

Environmental Effects

On the basis of the PEC/PNEC ratio, the notified chemical is not considered to pose a risk to the environment based on its reported use pattern.

RECOMMENDATIONS*Control Measures***Occupational Health and Safety**

- No specific engineering controls, work practices or personal protective equipment are required for the safe use of the notified chemical itself, however, these should be selected on the basis of all ingredients in the formulation.

Guidance in selection of personal protective equipment can be obtained from Australian, Australian/New Zealand or other approved standards.

- In the interest of occupational health and safety, the following guidelines and precautions should be observed for use of the notified chemical as introduced in developer bottles and cartridges:
 - Wearing cotton or disposable gloves during replacement of photographic bottles and cartridges, machine maintenance and repair services;
 - Adequate induction and training programs for service personnel;

- Photographic machines should be positioned in well-ventilated areas.
- A copy of the MSDS should be easily accessible to employees.
- If products and mixtures containing the notified chemical are classified as hazardous to health in accordance with the NOHSC *Approved Criteria for Classifying Hazardous Substances*, workplace practices and control procedures consistent with provisions of State and Territory hazardous substances legislation must be in operation.

Disposal

- The notified chemical should be disposed of by incineration or to landfill in accordance with State/Territory waste disposal regulation.

Emergency procedures

- Spills of the notified chemical should be contained with an absorbent, inert material (soil, sand, sawdust, vermiculite) and collected in sealable, labelled containers for disposal.

Secondary Notification

The Director of Chemicals Notification and Assessment must be notified in writing within 28 days by the notifier, other importer or manufacturer:

Under Section 64(2) of the Act:

- if any of the circumstances listed in the subsection arise.

The Director will then decide whether secondary notification is required.

No additional secondary notification conditions are stipulated.

16 PUBLICATION SUMMARY REPORT

**CS 11580
Summary Report
Reference No: LTD/1206**

Fujifilm Australia Pty Ltd (ABN 80 000 064 433) of 114 Old Pittwater Road Brookvale NSW 2100 has submitted a limited notification statement in support of their application for an assessment certificate for CS 11580. The notified chemical will be imported as an ingredient (<3%) in fully formulated photographic developers for use in the photofinishing industry. Up to one tonne of the notified chemical will be imported per annum for each of the first five years.

ASSESSMENT OF PUBLIC, OCCUPATIONAL HEALTH AND SAFETY AND ENVIRONMENTAL EFFECTS**Hazard Assessment**

Based on the available data the notified chemical is not classified as hazardous under the NOHSC *Approved Criteria for Classifying Hazardous Substances*.

Occupational Health and Safety

There is Low Concern to occupational health and safety under the conditions of the occupational settings described.

Public Health

There is Negligible Concern to public health when used in the proposed manner.

Environmental Effects

On the basis of the PEC/PNEC ratio, the notified chemical is not considered to pose a risk to the environment based on its reported use pattern.

RECOMMENDATIONS*Control Measures***Occupational Health and Safety**

- No specific engineering controls, work practices or personal protective equipment are required for the safe use of the notified chemical itself, however, these should be selected on the basis of all ingredients in the formulation.

Guidance in selection of personal protective equipment can be obtained from Australian, Australian/New Zealand or other approved standards.

- In the interest of occupational health and safety, the following guidelines and precautions should be observed for use of the notified chemical as introduced in developer bottles and cartridges:
 - Wearing cotton or disposable gloves during replacement of photographic bottles and cartridges, machine maintenance and repair services;
 - Adequate induction and training programs for service personnel;

- Photographic machines should be positioned in well-ventilated areas.
- A copy of the MSDS should be easily accessible to employees.
- If products and mixtures containing the notified chemical are classified as hazardous to health in accordance with the NOHSC *Approved Criteria for Classifying Hazardous Substances*, workplace practices and control procedures consistent with provisions of State and Territory hazardous substances legislation must be in operation.

Disposal

- The notified chemical should be disposed of by incineration or to landfill in accordance with State/Territory waste disposal regulation.

Emergency procedures

- Spills of the notified chemical should be contained with an absorbent, inert material (soil, sand, sawdust, vermiculite) and collected in sealable, labelled containers for disposal.

Secondary Notification

The Director of Chemicals Notification and Assessment must be notified in writing within 28 days by the notifier, other importer or manufacturer:

Under Section 64(2) of the Act:

- if any of the circumstances listed in the subsection arise.

The Director will then decide whether secondary notification is required.

No additional secondary notification conditions are stipulated.

17 PUBLICATION SUMMARY REPORT

**TKP 50085
Summary Report
Reference No: LTD/1209**

Ciba Specialty Chemicals (ABN: 97 005 061 469) of 235 Settlement Road Thomastown, VIC 3074 has submitted a limited notification statement in support of their application for an assessment certificate for TKP 50085. The notified chemical is intended to be used as a component of ink-jet printing ink. Up to 1 tonne of the notified chemical will be imported per annum for each of the first five years.

ASSESSMENT OF PUBLIC, OCCUPATIONAL HEALTH AND SAFETY AND ENVIRONMENTAL EFFECTS**Hazard Assessment**

Based on the available data the notified chemical is not classified as hazardous under the NOHSC *Approved Criteria for Classifying Hazardous Substances*.

Occupational Health and Safety

There is Low Concern to occupational health and safety under the conditions of the occupational settings described.

Public Health

There is No Significant Concern to public health when used as a component of ink-jet printer ink at <10%.

Environmental Effects

On the basis of the PEC/PNEC ratio the chemical is not considered to pose a risk to the environment based on its reported use pattern.

RECOMMENDATIONS*Control Measures***Occupational Health and Safety**

- Employers should ensure that the following personal protective equipment is used by workers to minimise occupational exposure to the notified chemical:
 - Wear gloves when servicing printers.

Guidance in selection of personal protective equipment can be obtained from Australian, Australian/New Zealand or other approved standards.

- A copy of the MSDS should be easily accessible to employees.
- If products and mixtures containing the notified chemical are classified as hazardous to health in accordance with the NOHSC *Approved Criteria for Classifying Hazardous Substances*, workplace practices and control procedures consistent with

provisions of State and Territory hazardous substances legislation must be in operation.

Disposal

- The notified chemical should be disposed of by incineration, landfill or recycling.

Emergency procedures

- No special precaution necessary

Secondary Notification

The Director of Chemicals Notification and Assessment must be notified in writing within 28 days by the notifier, other importer or manufacturer:

Under Section 64(1) of the Act; if

- the importation volume exceeds one tonne per annum notified chemical
- health and/or environmental data becomes available on potential degradation products

or

Under Section 64(2) of the Act:

- if any of the circumstances listed in the subsection arise.

The Director will then decide whether secondary notification is required

18 PUBLICATION SUMMARY REPORT

**Polymer in RE3698
Summary Report
Reference No: LTD/1212**

BASF Coatings Australia Pty Ltd (ABN 91 092 127 501) of 51 McIntyre Rd, Sunshine, VIC 3020 and Akzo Nobel Pty Ltd (ABN 91 000 017 354) of 51 McIntyre Rd, Sunshine, VIC 3020 have submitted a limited notification statement in support of their application for an assessment certificate for Polymer in RE3698. The notified polymer is intended to be used as a component of a OEM automotive coating. Formulation and application of the automotive coatings and potential future manufacture of the notified polymer will be carried out in Victoria. Ten to thirty tonnes of the notified polymer will be imported (or potentially manufactured) per annum for each of the first five years.

ASSESSMENT OF PUBLIC, OCCUPATIONAL HEALTH AND SAFETY AND ENVIRONMENTAL EFFECTS**Hazard Assessment**

No toxicological data have been provided for the notified polymer and therefore the substance cannot be classified in accordance with the NOHSC Approved Criteria for Classifying Hazardous Substances.

The polymer has a high molecular weight and is therefore unlikely to be absorbed across biological membranes, however, as the notified polymer is polycationic it may have irritant properties.

Occupational Health and Safety

There is Low Concern to occupational health and safety under the conditions of the occupational settings described.

Public Health

There is Negligible Concern to public health when used in the proposed manner.

Environmental Effects

The chemical is not considered to pose a risk to the environment based on its reported use pattern.

RECOMMENDATIONS*Control Measures***Occupational Health and Safety**

- Employers should implement the following safe work practices to minimise occupational exposure during handling of the notified polymer as introduced and in formulated coating products:
 - Avoid skin and eye contact

- Employers should ensure that the following personal protective equipment is used by workers to minimise occupational exposure to the notified polymer as introduced and in formulated coating products:
 - Impermeable gloves;
 - Overalls;
 - Chemical goggles/face shields

Guidance in selection of personal protective equipment can be obtained from Australian, Australian/New Zealand or other approved standards.

- A copy of the MSDS should be easily accessible to employees.
- If products and mixtures containing the notified chemical are classified as hazardous to health in accordance with the NOHSC *Approved Criteria for Classifying Hazardous Substances*, workplace practices and control procedures consistent with provisions of State and Territory hazardous substances legislation must be in operation.

Environment

- The following control measures should be implemented by coating formulator to minimise environmental exposure during use of the notified polymer:
 - All process equipment and storage areas should be bunded with process drains going to an on-site effluent treatment plant or collection tank.

Disposal

- The notified polymer should be disposed of to landfill or by incineration, where available.

Emergency procedures

- Spills of the notified polymer should be handled by containment and collection by absorbent material, then storage of absorbent material in sealable labelled container ready for disposal to landfill.

Secondary Notification

The Director of Chemicals Notification and Assessment must be notified in writing within 28 days by the notifier, other importer or manufacturer:

Under Section 64(2) of the Act:

- if any of the circumstances listed in the subsection arise.

The Director will then decide whether secondary notification is required.

No additional secondary notification conditions are stipulated.

19 PUBLICATION SUMMARY REPORT

**Polymer in RW3656
Summary Report
Reference No: LTD/1213**

BASF Coatings Australia Pty Ltd (ABN 91 092 127 501) of 51 McIntyre Rd, Sunshine, VIC 3020 and Akzo Nobel Pty Ltd (ABN 91 000 017 354) of 51 McIntyre Rd, Sunshine, VIC 3020 have submitted a limited notification statement in support of their application for an assessment certificate for Polymer in RW3656. The notified polymer is intended to be used as component of OEM automotive coating. Manufacture of the notified polymer and formulation and application of the automotive coating will be carried out in Victoria. Up to 5000 tonnes of the notified polymer will be manufactured per annum for each of the first five years.

ASSESSMENT OF PUBLIC, OCCUPATIONAL HEALTH AND SAFETY AND ENVIRONMENTAL EFFECTS**Hazard Assessment**

No toxicological data have been provided for the notified polymer and therefore the substance cannot be classified in accordance with the NOHSC Approved Criteria for Classifying Hazardous Substances.

The polymer has a high molecular weight and is therefore unlikely to be absorbed across biological membranes, however, as the notified polymer is polycationic it may have irritant properties.

Occupational Health and Safety

There is Low Concern to occupational health and safety under the conditions of the occupational settings described.

Public Health

There is Negligible Concern to public health when used in the proposed manner.

Environmental Effects

The chemical is not considered to pose a risk to the environment based on its reported use pattern.

RECOMMENDATIONS*Control Measures***Occupational Health and Safety**

- Employers should implement the following safe work practices to minimise occupational exposure during handling of the notified polymer as introduced and in formulated coating products:
 - Avoid skin and eye contact

- Employers should ensure that the following personal protective equipment is used by workers to minimise occupational exposure to the notified polymer as introduced and in formulated coating products:
 - Impermeable gloves;
 - Overalls;
 - Chemical goggles/face shields

Guidance in selection of personal protective equipment can be obtained from Australian, Australian/New Zealand or other approved standards.

- A copy of the MSDS should be easily accessible to employees.
- If products and mixtures containing the notified chemical are classified as hazardous to health in accordance with the NOHSC *Approved Criteria for Classifying Hazardous Substances*, workplace practices and control procedures consistent with provisions of State and Territory hazardous substances legislation must be in operation.

Environment

- The following control measures should be implemented by coating formulator to minimise environmental exposure during use of the notified polymer:
 - All process equipment and storage areas should be bunded with process drains going to an on-site effluent treatment plant or collection tank.

Disposal

- The notified polymer should be disposed of to landfill or by incineration, where available.

Emergency procedures

- Spills of the notified polymer should be handled by containment and collection by absorbent material, then storage of absorbent material in sealable labelled container ready for disposal to landfill.

Secondary Notification

The Director of Chemicals Notification and Assessment must be notified in writing within 28 days by the notifier, other importer or manufacturer:

Under Section 64(2) of the Act:

- if any of the circumstances listed in the subsection arise.

The Director will then decide whether secondary notification is required.

No additional secondary notification conditions are stipulated.

20 PUBLICATION SUMMARY REPORT

**Polymer in RC3699
Summary Report
Reference No: LTD/1214**

BASF Coatings Australia Pty Ltd (ABN 91 092 127 501) of 51 McIntyre Rd, Sunshine 3020 VIC and Akzo Nobel Pty Ltd (ABN 91 000 017 354) of 51 McIntyre Rd, Sunshine 3020 VIC have submitted a limited notification statement in support of their application for an assessment certificate for Polymer in RC3699. The notified polymer is intended to be used as a component of a OEM automotive coating. Formulation and application of the automotive coating and potential future manufacture of the notified polymer will be carried out in Victoria. Thirty to sixty tonnes of the notified polymer will be imported per annum for each of the first five years.

ASSESSMENT OF PUBLIC, OCCUPATIONAL HEALTH AND SAFETY AND ENVIRONMENTAL EFFECTS**Hazard Assessment**

No toxicological data have been provided for the notified polymer and therefore the substance cannot be classified in accordance with the NOHSC Approved Criteria for Classifying Hazardous Substances.

The notified polymer contains one type of high concern reactive functional group. The health concerns for this type of functionality are cancer and reproductive effects. However, health concerns are restricted to species with molecular weights <1000, and <500 if exposure is limited to the dermal route. The notified polymer contains only a minority of species with a molecular weight < 1000, reducing the likelihood of health effects attributed to this functional group.

Occupational Health and Safety

There is Low Concern to occupational health and safety under the conditions of the occupational settings described.

Public Health

There is Negligible Concern to public health when used in the proposed manner.

Environmental Effects

The notified polymer is a non-ionic polymer, which the literature indicates is of low concern to the aquatic environment. The polymer is not considered to pose a risk to the environment based on its reported use pattern.

RECOMMENDATIONS*Regulatory Controls*

- If future manufacture of the notified polymer occurs in Australia, any polymer constituents not listed on the Australian Inventory of Chemical Substances will need to be notified to NICNAS.

Control Measures

Occupational Health and Safety

- Employers should implement the following engineering controls to minimise occupational exposure to the notified polymer in formulated coating products:
 - Spray application should be conducted in a down draft spray booth.
- Employers should implement the following safe work practices to minimise occupational exposure during handling of the notified polymer as introduced and in formulated coating products:
 - Avoid skin and eye contact
 - Avoid generation of aerosols during handling and formulation
- Employers should ensure that the following personal protective equipment is used by workers to minimise occupational exposure to the notified polymer as introduced and in formulated coating products:
 - Impermeable gloves;
 - Overalls;
 - Chemical goggles/face shields for industrial spray painters;
 - Vapour respirators if required.

Guidance in selection of personal protective equipment can be obtained from Australian, Australian/New Zealand or other approved standards.

- A copy of the MSDS should be easily accessible to employees.
- If products and mixtures containing the notified polymer are classified as hazardous to health in accordance with the NOHSC *Approved Criteria for Classifying Hazardous Substances*, workplace practices and control procedures consistent with provisions of State and Territory hazardous substances legislation must be in operation.

Environment

- The following control measures should be implemented by coating formulator to minimise environmental exposure during use of the notified polymer:
 - All process equipment and storage areas should be bunded with process drains going to an on-site effluent treatment plant or collection tank.

Disposal

- The notified polymer should be disposed of to landfill or by incineration, where available.

Emergency procedures

- Spills of the notified polymer should be handled by containment and collection by absorbent material, then storage of absorbent material in sealable labelled container ready for disposal to landfill.

Secondary Notification

The Director of Chemicals Notification and Assessment must be notified in writing within 28 days by the notifier, other importer or manufacturer:

Under Section 64(2) of the Act:

- if any of the circumstances listed in the subsection arise.

The Director will then decide whether secondary notification is required.

No additional secondary notification conditions are stipulated.

21 PUBLICATION SUMMARY REPORT

Quaternary Ammonium Salt in CP0200 Summary Report Reference No: LTD/1215

BASF Coatings Australia Pty Ltd (ABN 91 092 127 501) of 51 McIntyre Rd, Sunshine 3020 VIC 3020 and Akzo Nobel Pty Ltd (ABN 91 000 017 354) of 51 McIntyre Rd 3020 Sunshine, VIC 3020 have submitted a limited notification statement in support of their application for an assessment certificate for Quaternary ammonium salt in CP0200. . The notified chemical is intended to be used as a component of a OEM automotive coating. Formulation and application of the automotive coating and potential future manufacture of the notified chemical will be carried out in Victoria. Up to one tonne of the notified chemical will be imported per annum for each of the first five years.

ASSESSMENT OF PUBLIC, OCCUPATIONAL HEALTH AND SAFETY AND ENVIRONMENTAL EFFECTS

Hazard Assessment

No toxicological data have been provided for the notified chemical and therefore the substance cannot be classified in accordance with the NOHSC Approved Criteria for Classifying Hazardous Substances. However, based the on classification of similar chemicals, the following classification and labelling details should apply:

- R22 Harmful if swallowed
- R38 Irritating to skin
- R41 Risk of serious damage to eyes

Occupational Health and Safety

There is Low Concern to occupational health and safety under the conditions of the occupational settings described.

Public Health

There is Negligible Concern to public health when used in the proposed manner.

Environmental Effects

The notified chemical is cationic, a group known to display toxicity to aquatic organisms, however, the chemical is not considered to pose a risk to the environment based on its reported use pattern.

RECOMMENDATIONS

Regulatory Controls

Hazard Classification and Labelling

- Use the following risk phrases for products/mixtures containing the notified chemical:
 - Conc \geq 25%: R22; R38; R41
 - 20% \leq conc < 25%: R38; R41
 - 10% \leq conc < 20%: R41
 - 5% \leq conc < 10%: R36

Control Measures

Occupational Health and Safety

- Employers should implement the following engineering controls to minimise occupational exposure to the notified chemical in formulated coating products:
 - Spray application should be conducted in a down draft spray booth.
- Employers should implement the following safe work practices to minimise occupational exposure during handling of the notified chemical as introduced and in formulated coating products:
 - Avoid skin and eye contact
- Employers should ensure that the following personal protective equipment is used by workers to minimise occupational exposure to the notified chemical as introduced and in formulated coating products:
 - Impermeable gloves;
 - Overalls;
 - Chemical goggles/face shields for industrial spray painters;
 - Vapour respirators if required.

Guidance in selection of personal protective equipment can be obtained from Australian, Australian/New Zealand or other approved standards.

- A copy of the MSDS should be easily accessible to employees.
- If products and mixtures containing the notified chemical are classified as hazardous to health in accordance with the NOHSC *Approved Criteria for Classifying Hazardous Substances*, workplace practices and control procedures consistent with provisions of State and Territory hazardous substances legislation must be in operation.

Environment

- The following control measures should be implemented by coating formulator to minimise environmental exposure during use of the notified chemical:
 - All process equipment and storage areas should be bunded with process drains going to an on-site effluent treatment plant or collection tank.

Disposal

- The notified chemical should be disposed of to landfill or by incineration, where available.

Emergency procedures

- Spills/release of the notified chemical should be handled by containment and collection by absorbent material, then storage of absorbent material in sealable labelled container ready for disposal to landfill.

Secondary Notification

The Director of Chemicals Notification and Assessment must be notified in writing within 28 days by the notifier, other importer or manufacturer:

Under Section 64(1) of the Act; if

- the importation volume exceeds one tonne per annum notified chemical;

or

Under Section 64(2) of the Act:

- if any of the circumstances listed in the subsection arise.

The Director will then decide whether secondary notification is required.

22 PUBLICATION SUMMARY REPORT

Pigment Yellow 8882C/Cromphtal Yellow HRP-NGa Summary Report Reference No: STD/1143

Ciba Specialty Chemicals Pty Ltd (ABN 005 061 469) of Thomastown, VIC 3074 has submitted a standard notification statement in support of their application for an assessment certificate for Pigment Yellow 8882C/Cromphtal Yellow HRP-NGa. The notified chemical is intended to be used as a polymer colourant. Up to 5 tonnes of the notified chemical will be imported per annum for each of the first five years.

ASSESSMENT OF PUBLIC, OCCUPATIONAL HEALTH AND SAFETY AND ENVIRONMENTAL EFFECTS

Hazard Assessment

Based on the available data the notified chemical is not classified as hazardous under the NOHSC *Approved Criteria for Classifying Hazardous Substances*.

Occupational Health and Safety

There is Low Concern to occupational health and safety under the conditions of the occupational settings described.

Public Health

There is Negligible Concern to public health when used as a colourant to be used to colour polymer masterbatches or plastic articles.

Environmental Effects

The chemical is not considered to pose a risk to the environment based on its reported use pattern.

RECOMMENDATIONS

Control Measures

Occupational Health and Safety

- A copy of the MSDS should be easily accessible to employees.
- If products and mixtures containing the notified chemical are classified as hazardous to health in accordance with the NOHSC *Approved Criteria for Classifying Hazardous Substances*, workplace practices and control procedures consistent with provisions of State and Territory hazardous substances legislation must be in operation.

Disposal

- The notified chemical should be disposed of by landfill or incineration.

Emergency procedures

- Spills/release of the notified chemical should be contained, collected and stored in a labelled, sealable container ready for disposal.

Secondary Notification

The Director of Chemicals Notification and Assessment must be notified in writing within 28 days by the notifier, other importer or manufacturer:

Under Section 64(2) of the Act:

- if any of the circumstances listed in the subsection arise.

The Director will then decide whether secondary notification is required.

No additional secondary notification conditions are stipulated.

23 PUBLICATION SUMMARY REPORT

**Polymer in HP-877
Summary Report
Reference No: STD/1144**

PPG Industries Australia Pty Ltd (ABN 82 055 500 939) of McNaughton Road, Clayton, VIC 3168 has submitted a standard notification statement in support of their application for an assessment certificate for Polymer in HP-877. The notified polymer is intended to be used as a component of an automotive spraypaint. Paint formulation and application will occur in Victoria. Up to ten tonnes of the notified polymer will be imported per annum for each of the first five years.

ASSESSMENT OF PUBLIC, OCCUPATIONAL HEALTH AND SAFETY AND ENVIRONMENTAL EFFECTS**Hazard Assessment**

Based on the limited available data the notified polymer is not classified as hazardous under the NOHSC *Approved Criteria for Classifying Hazardous Substances*.

Occupational Health and Safety

There is Low Concern to occupational health and safety under the conditions of the occupational settings described.

Public Health

There is Negligible Concern to public health when used in the proposed manner.

Environmental Effects

The chemical is not considered to pose a risk to the environment based on its reported use pattern

RECOMMENDATIONS*Control Measures***Occupational Health and Safety**

- Employers should implement the following engineering controls to minimise occupational exposure to the notified polymer in formulated paint products:
 - Spray application should be conducted in a down draft spray booth.
- Employers should implement the following safe work practices to minimise occupational exposure during handling of the notified polymer as introduced and in formulated paint products:
 - Avoid skin and eye contact
 - Use of spray paints containing the notified polymer should be accordance with the NOHSC National Guidance Material for Spray Painting

- Employers should ensure that the following personal protective equipment is used by workers to minimise occupational exposure to the notified polymer as introduced and in formulated paint products:
 - Impermeable gloves;
 - Overalls;
 - Chemical goggles/face shields for industrial spray painters;
 - Vapour respirators if required.

Guidance in selection of personal protective equipment can be obtained from Australian, Australian/New Zealand or other approved standards.

- A copy of the MSDS should be easily accessible to employees.
- If products and mixtures containing the notified chemical are classified as hazardous to health in accordance with the NOHSC *Approved Criteria for Classifying Hazardous Substances*, workplace practices and control procedures consistent with provisions of State and Territory hazardous substances legislation must be in operation.

Environment

- The following control measures should be implemented by paint formulator to minimise environmental exposure during use of the notified polymer:
 - All process equipment and storage areas should be banded with process drains going to an on-site effluent treatment plant or collection tank.

Disposal

- The notified polymer should be disposed of to landfill or by incineration, where available.

Emergency procedures

- Spills/release of the notified polymer should be handled by containment and collection by absorbent material, then storage of absorbent material in sealable labelled container ready for disposal to landfill. (if necessary)

Secondary Notification

The Director of Chemicals Notification and Assessment must be notified in writing within 28 days by the notifier, other importer or manufacturer:

Under Section 64(2) of the Act:

- if any of the circumstances listed in the subsection arise.

The Director will then decide whether secondary notification is required.

No additional secondary notification conditions are stipulated.

24 PUBLICATION SUMMARY REPORT

IRGACOR® DC 11 Summary Report Reference No: STD/1172

Ciba Specialty Chemicals Pty Ltd (ABN 97 005 061 469) of 235 Settlement Road, Thomastown VIC 3074 has submitted a standard notification statement in support of their application for an assessment certificate for IRGACOR® DC 11. The notified chemical is intended to be used as a corrosion inhibitor for metal working fluids (aqueous) and lubricants (non-aqueous systems). A maximum of 10 tonnes of the notified chemical will be imported per annum for each of the first five years.

ASSESSMENT OF PUBLIC, OCCUPATIONAL HEALTH AND SAFETY AND ENVIRONMENTAL EFFECTS

Hazard Assessment

Based on the available data the notified chemical is classified as hazardous under the NOHSC *Approved Criteria for Classifying Hazardous Substances*. The classification and labelling details are:

- Xi: R36 Irritating to eyes

As a comparison only, the classification of notified chemical using the Globally Harmonised System for the Classification and Labelling of Chemicals (GHS) (United Nations, 2003) is presented below. This system is not mandated in Australia and carries no legal status but is presented for information purposes.

	<i>Hazard category</i>	<i>Hazard statement</i>
Irritant	2A*	Causes serious eye irritation

*Note: Insufficient data in the summary report to determine if the effects were irreversible therefore a conservative hazard category of 2A was determined.

Occupational Health and Safety

There is Low Concern to occupational health and safety under the conditions of the occupational settings described.

Public Health

There is Negligible Concern to public health when used as a component in metalworking fluids and engine lubricants.

Environmental Effects

The chemical is not considered to pose a risk to the environment based on its reported use pattern.

RECOMMENDATIONS

Regulatory Controls

Hazard Classification and Labelling

- The ASCC Chemicals Standards Sub-committee should consider the following health, hazard classification for the notified chemical:
 - Xi: R36 Irritant: Irritating to eyes
- Use the following risk phrases for products/mixtures containing the notified chemical:
 - $\geq 20\%$: risk phrases Xi: R36 Irritant: Irritating to eyes
- The following safety phrases should appear on the MSDS and label for the notified chemical:
 - S25: Avoid contact with eyes

Control Measures

Occupational Health and Safety

- The following engineering controls should be implemented to minimise occupational exposure to powder form of the notified chemical:
 - Closed systems for formulation
 - Local exhaust ventilation during weighing and transfer of the notified chemical powder
- Employers should ensure that the following personal protective equipment is used by workers to minimise occupational exposure to the notified chemical as introduced:
 - Gloves
 - Protective clothing
 - Safety eye protection
 - Dust mask or respirator when sufficient ventilation is not available.

Guidance in selection of personal protective equipment can be obtained from Australian, Australian/New Zealand or other approved standards.

- A copy of the MSDS should be easily accessible to employees.
- If products and mixtures containing the notified chemical are classified as hazardous to health in accordance with the NOHSC *Approved Criteria for Classifying Hazardous Substances*, workplace practices and control procedures consistent with provisions of State and Territory hazardous substances legislation must be in operation.

Environment

- Use and storage of the notified chemical in sealed and banded areas

Disposal

- The notified chemical should be disposed of by incineration.

Emergency procedures

In case of spill of the notified chemical dampen down powder and avoid dust. Scoop into marked containers for disposal as chemical waste.

Secondary Notification

The Director of Chemicals Notification and Assessment must be notified in writing within 28 days by the notifier, other importer or manufacturer:

Under Section 64(2) of the Act:

- if any of the circumstances listed in the subsection arise.

The Director will then decide whether secondary notification is required.

No additional secondary notification conditions are stipulated.

25 PUBLICATION SUMMARY REPORT

**PLA Polymer
Summary Report
Reference No: EX/77**

Dow Chemical Australia Ltd), (ACN: 000 264 979) of 541-583 Kororoit Creek Road, Altona VIC 3018 has previously submitted a limited notification statement in support of an application for an assessment certificate for PLA Polymer, assessment certificate No. 1340. The notified polymer is intended for use as a replacement for a number of common polymers including polyesters, polyolefins, polystyrene and cellulose. Less than 100 tonnes of the notified polymer will be imported per annum for each of the first five years.

Since the granting of the above-mentioned assessment certificate, Chemiplas Australia Pty Ltd (ABN: 29 003 056 808) of 3/112 Wellington Parade, East Melbourne Victoria 3002, has submitted a notification statement in support of their application for an extension of the original assessment certificate for PLA Polymer. The use pattern and import volumes detailed above will remain the same.

ASSESSMENT OF PUBLIC, OCCUPATIONAL HEALTH AND SAFETY AND ENVIRONMENTAL EFFECTS

The notified polymer is of very low oral toxicity in rats and low dermal toxicity in rabbits, and is a slight skin and eye irritant to rabbits. The MSDS for the notified polymer indicates that moderate eye irritation may occur on acute exposure. It is not a skin sensitiser in guinea pigs. For the endpoints tested, the notified polymer is not classified as a hazardous substance in accordance with the Approved Criteria.

Occupational Health and Safety

Little occupational exposure to the notified polymer is likely due its physical form (pellets or fabricated fibres, sheets or articles). In these forms the notified polymer is unlikely to be bioavailable. Handling is generally automated and enclosed. Should dusts occur, ocular exposure is possible, and safety glasses should be worn. A dust mask or respirator should be used in very dusty conditions. The NOHSC exposure standard for dusts in general of 10 mg/m³ should be adhered to in handling the notified polymer in powder form.

The pellets pose a slip hazard, and should be cleaned up immediately. Processing involves elevated temperatures, and precautions should be taken where newly fabricated polymer products are handled. Toxic fumes may be generated if the notified polymer is overheated (> 230°C), and precautions should be taken to prevent overheating; respiratory protection may be required should decomposition products be formed.

Public Health

Public exposure to the notified polymer will be through contact with moulded products, however, in this form it is not bioavailable. Chewing, in particular by children, of the products and raw pellet form, which could be mistaken for lollies, is not likely to pose a significant toxicological risk due to the very low oral toxicity. The use of the polymer in food containers is not likely to pose a threat to public health as the oral toxicity is very low and very little of the notified polymer would become available in the food. Similarly the use in textiles, particularly clothing, is unlikely to pose a public health threat due to the low dermal

toxicity and skin irritancy of the polymer. Dust generated through cutting or grinding will render the polymer bioavailable, however, as it is of low toxicity and a low skin and eye irritant, it is unlikely to pose a significant public health hazard.

Environmental Effects

Spills of the pelletised polymer will be collected and either reused or disposed of to landfill. Empty carton liners containing residual polymer will also be disposed of in landfill or incinerated to produce water vapour and oxides of carbon.

The notifier has produced three separate composting tests: an Aerobic Biodegradation Test under controlled composting conditions; a Pilot Scale Composting Test; and a Pilot Scale Composting and Sieving Test for Measurement of Disintegration. The aerobic biodegradation test indicated the percentage degradation of cellulose after 90 days was approximately 92 %. After the same period the notified polymer degraded up to 95.5 %. Therefore, the notified polymer was biodegraded by microorganisms under the test conditions. All three tests indicate that under composting conditions the notified polymer completely disintegrates within 90 days.

Manufacturing waste and notified polymer incorporated into final articles will eventually be disposed of in landfill. In landfill, the polymer is unlikely to be mobile in soil due to its low water solubility and is expected to degrade to gases such as carbon dioxide through abiotic and biotic processes. The large molecular weight and low water solubility of the notified polymer should prevent bioaccumulation.

The ecotoxicity data indicate the degradation products formed during the composting of samples of several different forms of the notified polymer are no more toxic to earthworms, *Daphnia*, the rotifer *Brachionus calyciflorus* and the crustacean *Thamnocephalus platyurus* than the control and cellulose compost and compost eluant. The germination and growth of summer barley and the germination of cress plants are not inhibited when grown in compost in which the degradation products of the notified polymer were present when compared with control and cellulose compost.

Therefore, the environmental exposure and overall environmental hazard from the notified chemical is expected to be low.

RECOMMENDATIONS

Control Measures

Occupational Health and Safety

- Employers should implement the following safe work practices to minimise occupational exposure during handling of the notified polymer:
 - The NOHSC exposure standard for dusts in general of 10 mg/m³ TWA should be adhered to in handling the notified polymer in powder form; if work practices and engineering controls do not reduce exposure to dust or thermal decomposition products sufficiently, respiratory protection should be used;
 - Spillages are a slip hazard and should be swept up promptly and put into containers for disposal.

- Employers should ensure that the following personal protective equipment is used by workers to minimise occupational exposure to the notified polymer:
 - Protective eyewear, industrial clothing and footwear should be used during occupational handling of the notified polymer.

Guidance in selection of personal protective equipment can be obtained from Australian, Australian/New Zealand or other approved standards.

- A copy of the MSDS should be easily accessible to employees.
- If products and mixtures containing the notified polymer are classified as hazardous to health in accordance with the NOHSC *Approved Criteria for Classifying Hazardous Substances*, workplace practices and control procedures consistent with provisions of State and Territory hazardous substances legislation must be in operation.

Secondary notification

The Director of Chemicals Notification and Assessment must be notified in writing within 28 days by the notifier, other importer or manufacturer:

Under Section 64(2) of the Act:

- if any of the circumstances listed in the subsection arise.

The Director will then decide whether secondary notification is required.

No additional secondary notification conditions are stipulated.

26 PUBLICATION SUMMARY REPORT

**Polymer in Setalux 6778 AQ-44
Summary Report
Reference No: PLC/568**

Nuplex Industries (AUST.) Pty. Ltd., (ABN: 25 000 045 572) of 46-61 Stephen Road, Botany NSW, 1455 has submitted a polymer of low concern (PLC) notification statement in support of their application for an assessment certificate for Polymer in Setalux 6778 AQ-44. The notified polymer is intended to be used as polymer component of surface coatings used primarily by the joinery industry. 100–10000 tonnes of the notified polymer will be imported per annum for each of the first five years.

ASSESSMENT OF PUBLIC, OCCUPATIONAL HEALTH AND SAFETY AND ENVIRONMENTAL EFFECTS**Hazard Assessment**

The notified polymer meets the PLC criteria and can therefore be considered to be of low hazard.

Occupational Health and Safety

There is Low Concern to occupational health and safety under the conditions of the occupational settings described.

Public Health

There is No Significant Concern to public health when used in the proposed manner with appropriate personal protective equipment.

Environmental Effects

The polymer is not considered to pose a risk to the environment based on its reported use pattern.

RECOMMENDATIONS*Control Measures***Occupational Health and Safety**

- No specific engineering controls, work practices or personal protective equipment are required for the safe use of the notified polymer itself, however, these should be selected on the basis of all ingredients in the formulation.

Guidance in selection of personal protective equipment can be obtained from Australian, Australian/New Zealand or other approved standards.

- A copy of the MSDS should be easily accessible to employees.
- If products and mixtures containing the notified polymer are classified as hazardous to health in accordance with the NOHSC *Approved Criteria for Classifying Hazardous*

Substances, workplace practices and control procedures consistent with provisions of State and Territory hazardous substances legislation must be in operation.

Disposal

- The notified polymer should be disposed of by landfill

Emergency procedures

- Place inert absorbent material onto spillage. Use clean non-sparking tools to collect the material and place into a suitable labelled container. Dispose of the waste according to government regulation.

Secondary Notification

The Director of Chemicals Notification and Assessment must be notified in writing within 28 days by the notifier, other importer or manufacturer:

Under subsection 64(1) of the Act; if

- the notified polymer is introduced in a chemical form that does not meet the PLC criteria.

or

Under subsection 64(2) of the Act:

- if any of the circumstances listed in the subsection arise.

The Director will then decide whether secondary notification is required.

27 PUBLICATION SUMMARY REPORT

**Polymer in RC-29937
Summary Report
Reference No: PLC/579**

DuPont (Australia) Ltd (ABN 59 000 716 469) of 168 Walker Street North Sydney NSW 2060 has submitted a polymer of low concern (PLC) notification statement in support of their application for a self-assessed assessment certificate for Polymer in RC-29937. The notified polymer is intended to be used in automotive paints for professional use. Less than 100 tonnes of the notified polymer will be introduced per annum for each of the first five years.

ASSESSMENT OF PUBLIC, OCCUPATIONAL HEALTH AND SAFETY AND ENVIRONMENTAL EFFECTS**Hazard Assessment**

The notified polymer meets the PLC criteria and can therefore be considered to be of low hazard.

Occupational Health and Safety

There is Low Concern to occupational health and safety under the conditions of the occupational settings described in the notification statement.

Public Health

There is Negligible Concern to public health when used in the proposed manner.

Environmental Effects

The polymer is not considered to pose a risk to the environment based on its reported use pattern.

RECOMMENDATIONS*Control Measures***Occupational Health and Safety**

- No specific engineering controls or work practices are required for the safe use of the notified polymer itself, however, these should be selected on the basis of all ingredients in the formulation.

Guidance in selection of personal protective equipment can be obtained from Australian, Australian/New Zealand or other approved standards.

- Personal protective equipment required during formulation are:
 - Eye protection (safety glasses or goggles)
 - Impermeable gloves
 - Industrial clothing and footwear
 - Breathing Protection

- A copy of the MSDS should be easily accessible to employees.
- If products and mixtures containing the notified polymer are classified as hazardous to health in accordance with the NOHSC *Approved Criteria for Classifying Hazardous Substances*, workplace practices and control procedures consistent with provisions of State and Territory hazardous substances legislation must be in operation.

Environment

- The following control measures should be implemented by the notifier to minimise environmental exposure during formulation of the notified polymer:
 - Bunding
- The following control measures should be implemented by end users to minimise environmental exposure during, use of the notified polymer:
 - Exhaust ventilation with filter.

Disposal

- The notified polymer should be disposed of to landfill or incineration.
- Empty containers should be sent to local recycling or waster disposal facilities.

Emergency procedures

- Spills/release of the notified polymer should be handled by absorbing with sand and placing in suitable containers for disposal. Contaminated containers can be re-used after cleaning.

Secondary Notification

The Director of Chemicals Notification and Assessment must be notified in writing within 28 days by the notifier, other importer or manufacturer:

Under subsection 64(1) of the Act; if

- the notified polymer is introduced in a chemical form that does not meet the PLC criteria.

or

Under subsection 64(2) of the Act:

- if any of the circumstances listed in the subsection arise.

The Director will then decide whether secondary notification is required.

28 PUBLICATION SUMMARY REPORT

**Polymer in TEGO Airex 900
Summary Report
Reference No: PLC/587**

International Sales and Marketing (ABN 36 467 259 314) of 262 Highett Road VIC 3190 has submitted a polymer of low concern (PLC) notification statement in support of their application for an assessment certificate for Polymer in TEGO Airex 900. The notified polymer is to be used as a deaerator (up to 1.5%) in solvent free or low solvent paints. One tonne of the notified polymer will be imported per annum for the first year and then 5 tonnes per annum for each of the next four years.

ASSESSMENT OF PUBLIC, OCCUPATIONAL HEALTH AND SAFETY AND ENVIRONMENTAL EFFECTS**Hazard Assessment**

The notified polymer meets the PLC criteria and can therefore be considered to be of low hazard.

Occupational Health and Safety

There is Low Concern to occupational health and safety under the conditions of the occupational settings described.

Public Health

There is Negligible Concern to public health when used in the proposed manner.

Environmental Effects

The polymer is not considered to pose a risk to the environment based on its reported use pattern.

RECOMMENDATIONS*Control Measures***Occupational Health and Safety**

- No specific engineering controls, work practices or personal protective equipment are required for the safe use of the notified polymer itself, however, these should be selected on the basis of all ingredients in the formulation.

Guidance in selection of personal protective equipment can be obtained from Australian, Australian/New Zealand or other approved standards.

- A copy of the MSDS should be easily accessible to employees.
- If products and mixtures containing the notified polymer are classified as hazardous to health in accordance with the NOHSC *Approved Criteria for Classifying Hazardous Substances*, workplace practices and control procedures consistent with provisions of State and Territory hazardous substances legislation must be in operation.

Disposal

- The notified polymer should be disposed of to landfill.

Storage

Emergency procedures

- Spills/release of the notified polymer should be handled by physical containment, collection and disposal to secure landfill.

Secondary Notification

The Director of Chemicals Notification and Assessment must be notified in writing within 28 days by the notifier, other importer or manufacturer:

Under subsection 64(1) of the Act; if

- the notified polymer is introduced in a chemical form that does not meet the PLC criteria.

or

Under subsection 64(2) of the Act:

- if any of the circumstances listed in the subsection arise.

The Director will then decide whether secondary notification is required.

29 PUBLICATION SUMMARY REPORT

**Polymer in RC3711
Summary Report
Reference No: PLC/595**

BASF Coatings Australia Pty Ltd (ABN 092 127 501) of 51 McIntyre Rd Sunshine VIC 3020 and Akzo Nobel Pty Ltd (ABN 000 017 354) of 51 McIntyre Rd Sunshine VIC 3020 have submitted a polymer of low concern (PLC) notification statement in support of their application for an assessment certificate for Polymer in RC3711. The notified polymer is intended to be used as a component of OEM automotive paints. 20-40 tonnes of the notified polymer will be imported per annum for each of the first five years.

ASSESSMENT OF PUBLIC, OCCUPATIONAL HEALTH AND SAFETY AND ENVIRONMENTAL EFFECTS**Hazard Assessment**

The notified polymer meets the PLC criteria and can therefore be considered to be of low hazard.

Occupational Health and Safety

There is Low Concern to occupational health and safety under the conditions of the occupational settings described.

Public Health

There is Negligible Concern to public health when used in the proposed manner.

Environmental Effects

The polymer is not considered to pose a risk to the environment based on its reported use pattern.

RECOMMENDATIONS*Control Measures***Occupational Health and Safety**

- Employers should implement the following isolation and engineering controls to minimise occupational exposure to the imported notified polymer and the paint:
 - Closed tanks and lines for formulation and filling of paint containing the notified polymer;
 - Use of engineering controls in spray painting to minimise exposure of workers.

- Employers should implement the following safe work practices to minimise occupational exposure during handling of the imported notified polymer and the paint:
 - Avoid splashing, spills and generation of aerosols during formulation and filling processes;
 - Spray application of paint containing the notified polymer should be in accordance with the NOHSC National Guidance Material for Spray Painting;

- Workers using spray products containing the notified polymer should be instructed in their proper handling and use, including information about the additional risks posed by spray application.
- Employers should ensure that the following personal protective equipment is used by workers to minimise occupational exposure to the imported notified polymer and paint;
 - Protective gloves
 - Safety glasses or goggles
 - Industrial clothing
 - Respiratory protection during spray painting, or if aerosols are formed
 - Full body protection during spray painting

Guidance in selection of personal protective equipment can be obtained from Australian, Australian/New Zealand or other approved standards.

- A copy of the MSDS should be easily accessible to employees.
- If products and mixtures containing the notified polymer are classified as hazardous to health in accordance with the NOHSC *Approved Criteria for Classifying Hazardous Substances*, workplace practices and control procedures consistent with provisions of State and Territory hazardous substances legislation must be in operation.

Secondary Notification

The Director of Chemicals Notification and Assessment must be notified in writing within 28 days by the notifier, other importer or manufacturer:

Under subsection 64(1) of the Act; if

- the notified polymer is introduced in a chemical form that does not meet the PLC criteria.

or

Under subsection 64(2) of the Act:

- if any of the circumstances listed in the subsection arise.

The Director will then decide whether secondary notification is required.

30 PUBLICATION SUMMARY REPORT

**Fusabond EP
Summary Report
Reference No: SAPLC/1**

DuPont (Australia) Ltd (ABN 59 000 716 469) of North Sydney, NSW 2060 have submitted a polymer of low concern (PLC) notification statement in support of their application for a self-assessed assessment certificate for Fusabond EP. The notified polymer is intended to be used as a coupling agent between polymers. Less than 500 tonnes of the notified polymer will be imported per annum for each of the first five years.

ASSESSMENT OF PUBLIC, OCCUPATIONAL HEALTH AND SAFETY AND ENVIRONMENTAL EFFECTS**Hazard Assessment**

The notified polymer meets the criteria for a PLC and can therefore be considered to be of low hazard. The Fusabond EP polymers inherent insolubility in use and molecular size prevent the polymer creating systematic toxicity to humans by the skin. The same properties prevent absorption through the gastrointestinal tract.

Occupational Health and Safety

There is Low Concern to occupational health and safety under the conditions of the occupational settings described.

Public Health

There is Negligible Concern to public health when used in the proposed manner.

Environmental Effects

The polymer is not considered to pose a risk to the environment based on its reported use pattern.

RECOMMENDATIONS*Control Measures***Occupational Health and Safety**

- No specific engineering controls, work practices or personal protective equipment are required for the safe use of the notified polymer itself, however, these should be selected on the basis of all ingredients and high temperature processes in the manufacture thermoplastic extrusion and molding.
- Extrusion/injection molding equipment should have extractor fans off take cowls positioned over the machine inlets and output heads as small amounts of thermally degraded polymer form hot gases that should be exhausted from the building.

Guidance in selection of personal protective equipment can be obtained from Australian, Australian/New Zealand or other approved standards.

- Personal protective equipment required during extruder operation are:
 - Eye protection (safety glasses or goggles) used according to AS/NZS 1336 (1997) and manufactured to performance AS/NZS 1337 (1992)
 - Impermeable gloves conforming to AS/NZS 2161 (2000)
 - Industrial clothing AS 2919 (1987) and footwear conforming to AS/NZS 2210 (1994)
 - Breathing protection when working above a hot extruder ie maintenance according to AS/NZS 1715 (1994) and manufactured to performance AS/NZS 1716 (2003).
- A copy of the MSDS should be easily accessible to employees.
- If products and mixtures containing the notified polymer are classified as hazardous to health in accordance with the NOHSC *Approved Criteria for Classifying Hazardous Substances*, workplace practices and control procedures consistent with provisions of State and Territory hazardous substances legislation must be in operation.

Environment

- The following control measures should be implemented by the molder/mannufacturer to minimise environmental exposure during product manufacture using the notified chemical:
 - Undertake work in designated areas only
 - Collect all wastes and recycle where possible, otherwise contain in open drums and allow material to be recycled, burnt or dispose of to landfill.
- The following control measures should be implemented by end users to minimise environmental exposure during use of the notified polymer:
 - Exhaust ventilation of all drying hoppers and molding machines
 - Do not empty polymer waste into general refuse
 - Ensure no residual pellets remain in packaging before disposal.

Disposal

- Spill clean-up with broom or vacuum
- Disposal of scrap presents no special problems and can be by incorporation with polyethylene waste for low quality molding, use as molding machine purge, landfill as a non hazardous waste or incineration in a properly operated incinerator. Disposal to landfill should comply with local, state, and federal regulations using only approved waste management contractors.

Emergency procedures

- Spills/release of the notified polymer should be swept into a pile and shovelled into suitable container for disposal. Large volumes of spilt paint require dyking.
- Do not allow spills to enter watercourses or drains.

- Organise emergency training on an annual basis.

Secondary Notification

The Director of Chemicals Notification and Assessment must be notified in writing within 28 days by the notifier, other importer or manufacturer:

Under subsection 64(1) of the Act; if

- the notified polymer is introduced in a chemical form that does not meet the PLC criteria.

or

Under subsection 64(2) of the Act:

- if any of the circumstances listed in the subsection arise.

The Director will then decide whether secondary notification is required.

31 PUBLICATION SUMMARY REPORT

**Cristamid MS 1700
Summary Report
Reference No: SAPLC/4**

Arkema Pty Ltd (ABN/ACN 44 000 330 772) of Richmond, VIC 3121 has submitted a polymer of low concern (PLC) notification statement in support of their application for a self-assessed assessment certificate for Cristamid MS 1700. The notified polymer is intended to be used for moulding of precision plastics. Up to 150 tonnes of the notified polymer will be imported per annum for each of the first five years.

ASSESSMENT OF PUBLIC, OCCUPATIONAL HEALTH AND SAFETY AND ENVIRONMENTAL EFFECTS**Hazard Assessment**

The notified polymer meets the criteria for a PLC and can therefore be considered to be of low hazard. The Cristamid MS 1700 polymers inherent insolubility and molecular size prevent the polymer creating systematic toxicity to humans by the skin. The same properties prevent absorption through the gastrointestinal tract.

Occupational Health and Safety

There is Low Concern to occupational health and safety under the conditions of the occupational settings described.

Public Health

When used as a medical device there is public health concern that requires further specialist approval by the Australian Therapeutic Goods Administration before allowing public use in this application.

There is Negligible Concern to public health when used as a precision engineering polymer as these uses are usually in internal mechanical and electrical workings with limited ability of the public to touch the polymer.

Environmental Effects

The polymer is not considered to pose a risk to the environment based on its reported use pattern.

RECOMMENDATIONS*Control Measures***Occupational Health and Safety**

- No specific engineering controls, work practices or personal protective equipment are required for the safe use of the notified polymer itself, however, these should be selected on the basis of all ingredients and high temperature processes in the manufacture thermoplastic moulding.

- Extrusion/injection moulding equipment should have extractor fans off take cowls positioned over the machine inlets and output heads as small amounts of thermally degraded polymer form hot gases that should be exhausted from the building.

Guidance in selection of personal protective equipment can be obtained from Australian, Australian/New Zealand or other approved standards. Personal protective equipment required during extruder operation are:

- Eye protection (safety glasses or goggles) used according to AS/NZS 1336 (1997) and manufactured to performance AS/NZS 1337 (1992)
 - Impermeable gloves conforming to AS/NZS 2161 (2000)
 - Industrial clothing AS 2919 (1987) and footwear conforming to AS/NZS 2210 (1994)
 - Breathing protection when working above a hot extruder i.e., maintenance according to AS/NZS 1715 (1994) and manufactured to performance AS/NZS 1716 (2003).
- A copy of the MSDS should be easily accessible to employees.
 - If products and mixtures containing the notified polymer are classified as hazardous to health in accordance with the NOHSC *Approved Criteria for Classifying Hazardous Substances*, workplace practices and control procedures consistent with provisions of State and Territory hazardous substances legislation must be in operation.

Environment

- The following control measures should be implemented by the moulder/manufacture to minimise environmental exposure during product manufacture using the notified chemical:
 - Undertake work in designated areas only
 - Collect all wastes and recycle where possible, otherwise contain in open drums and allow material to be recycled, burnt or dispose of to landfill.
- The following control measures should be implemented by end users to minimise environmental exposure during use of the notified polymer:
 - Exhaust ventilation of all drying hoppers and molding machines
 - Do not empty polymer waste into general refuse
 - Ensure no residual pellets remain in packaging before disposal.

Disposal

- Spill clean-up with broom or vacuum
- Disposal of scrap presents no special problems and can be by incorporation with nylon resin for low quality moulding or use as moulding machine purge, landfill as a non hazardous waste or incineration in a properly operated incinerator. Disposal to landfill should comply with local, state, and federal government regulations using only approved waste management contractors.

Emergency procedures

- Spills/release of the notified polymer should be shovelled into metal containers. Decisions should be made if the material can be recycled into lower tolerance moulding.
- Organise emergency training on an annual basis.

Secondary Notification

The Director of Chemicals Notification and Assessment must be notified in writing within 28 days by the notifier, other importer or manufacturer:

Under subsection 64(1) of the Act; if

- the notified polymer is introduced in a chemical form that does not meet the PLC criteria.

or

Under subsection 64(2) of the Act;

- if any of the circumstances listed in the subsection arise.

The Director will then decide whether secondary notification is required.

32 PUBLICATION SUMMARY REPORT

**Polymer in RC-49315
Summary Report
Reference No: SAPLC/9**

DuPont (Australia) Ltd (ABN 59 000 716 469) of 168 Walker Street North Sydney NSW 2060 has submitted a polymer of low concern (PLC) notification statement in support of their application for a self-assessed assessment certificate for Polymer in RC-49315. The notified polymer is intended to be used in automotive paints for professional use. Less than 30 tonnes of the notified polymer will be imported per annum for each of the first five years.

ASSESSMENT OF PUBLIC, OCCUPATIONAL HEALTH AND SAFETY AND ENVIRONMENTAL EFFECTS**Hazard Assessment**

The notified polymer meets the PLC criteria and can therefore be considered to be of low hazard.

Occupational Health and Safety

There is Low Concern to occupational health and safety under the conditions of the occupational settings described.

Public Health

There is Negligible Concern to public health when used in the proposed manner.

Environmental Effects

The polymer is not considered to pose a risk to the environment based on its reported use pattern.

RECOMMENDATIONS*Control Measures***Occupational Health and Safety**

- No specific engineering controls or work practices are required for the safe use of the notified polymer itself, however, these should be selected on the basis of all ingredients in the formulation.

Guidance in selection of personal protective equipment can be obtained from Australian, Australian/New Zealand or other approved standards.

- Personal protective equipment required during formulation is
 - Eye protection (safety glasses or goggles)
 - Impermeable gloves
 - Industrial clothing and footwear
 - Breathing Protection
- A copy of the MSDS should be easily accessible to employees

- If products and mixtures containing the notified polymer are classified as hazardous to health in accordance with the NOHSC *Approved Criteria for Classifying Hazardous Substances*, workplace practices and control procedures consistent with provisions of State and Territory hazardous substances legislation must be in operation.

Environment

- The following control measures should be implemented by the notifier to minimise environmental exposure during formulation of the notified polymer:
 - Bunding
- The following control measures should be implemented by end users (spray painters) to minimise environmental exposure during use of the notified polymer:
 - Exhaust ventilation with filter

Disposal

- The notified polymer should be disposed of to landfill or incinerated.
- Empty containers should be sent to local recycling or waste disposal facilities.

Emergency procedures

- Spills/release of the notified polymer should be handled by absorbing with sand and placing into suitable container for disposal. Contaminated containers can be re-used after cleaning.

Secondary Notification

The Director of Chemicals Notification and Assessment must be notified in writing within 28 days by the notifier, other importer or manufacturer:

Under subsection 64(1) of the Act; if

- the notified polymer is introduced in a chemical form that does not meet the PLC criteria.

or

Under subsection 64(2) of the Act:

- if any of the circumstances listed in the subsection arise.

The Director will then decide whether secondary notification is required.

33 PUBLICATION SUMMARY REPORT

**Polymer in XC-84-6713
Summary Report
Reference No: SAPLC/11**

PPG Industries Australia Pty Ltd (ABN 82 055 500 939) of McNaughton Road Clayton VIC 3168 has submitted a polymer of low concern (PLC) notification statement in support of their application for a self-assessed assessment certificate for Polymer in XC-84-6713. The notified polymer is intended to be used as component of an automotive refinish coating. Less than 0.3 tonne of the notified polymer will be imported per annum for each of the first five years.

ASSESSMENT OF PUBLIC, OCCUPATIONAL HEALTH AND SAFETY AND ENVIRONMENTAL EFFECTS**Hazard Assessment**

The notified polymer meets the PLC criteria and can therefore be considered to be of low hazard.

Occupational Health and Safety

There is Low Concern to occupational health and safety under the conditions of the occupational settings described.

Public Health

There is Negligible Concern to public health when used in the proposed manner.

Environmental Effects

The polymer is not considered to pose a risk to the environment based on its reported use pattern.

RECOMMENDATIONS*Control Measures***Occupational Health and Safety**

- No specific engineering controls, work practices or personal protective equipment are required for the safe use of the notified polymer itself, however, these should be selected on the basis of all ingredients in the formulation.

Guidance in selection of personal protective equipment can be obtained from Australian, Australian/New Zealand or other approved standards.

- A copy of the MSDS should be easily accessible to employees.
- If products and mixtures containing the notified polymer are classified as hazardous to health in accordance with the NOHSC *Approved Criteria for Classifying Hazardous Substances*, workplace practices and control procedures consistent with provisions of State and Territory hazardous substances legislation must be in operation.

Environment

- The following control measures should be implemented by the coating applicator to minimise environmental exposure during use of the coating containing the notified polymer:
 - apply the coating containing the notified polymer in a spray booth conforming to the Australian standard, AS/NZ 4114.1-2.

Disposal

- The liquid containing the notified polymer should be disposed of to landfill or by incineration.
- Empty containers should be sent to local recycling or waste disposal facilities.

Emergency procedures

- Spills/release of the notified polymer should be handled by absorbing with sand and put into suitable containers for disposal. Contaminated containers can be reused after cleaning.
- Do not flush the product containing the notified polymer into surface water or sewer systems.

Secondary Notification

The Director of Chemicals Notification and Assessment must be notified in writing within 28 days by the notifier, other importer or manufacturer:

Under subsection 64(1) of the Act; if

- the notified polymer is introduced in a chemical form that does not meet the PLC criteria.

or

Under subsection 64(2) of the Act:

- if any of the circumstances listed in the subsection arise.

The Director will then decide whether secondary notification is required.

34 PUBLICATION SUMMARY REPORT

**Polymer in Bester 817
Summary Report
Reference No: SAPLC/15**

Rohm and Haas Australia Pty. Ltd. (ABN 29 004 513 188) of 4th Floor 969 Burke Road Camberwell VIC 3124 has submitted a polymer of low concern (PLC) notification statement in support of their application for a self-assessed assessment certificate for Polymer in Bester 817. The notified polymer is intended to be used in the manufacture of polyurethane resins. The polyurethane resins will be used in forming components of industrial machinery. Up to twenty (20) tonnes of the notified polymer will be imported per annum for each of the first five years.

ASSESSMENT OF PUBLIC, OCCUPATIONAL HEALTH AND SAFETY AND ENVIRONMENTAL EFFECTS**Hazard Assessment**

No toxicological information has been provided for the polymer in Bester 817. Its chemical structure suggests that the polymer has relatively low toxicity, and is not defined as a hazardous substance according to 'NOHSC *Approved criteria for classifying Hazardous Substances* (NOHSC: 1008 2004).

The notified polymer meets the PLC criteria and can therefore be considered to be of low hazard.

Occupational Health and Safety

There is Low Concern to occupational health and safety under the conditions of the occupational settings described.

Public Health

The notified polymer will not be sold to the public. There is Negligible Concern to public health when used as a polymer intermediate.

Environmental Effects

The polymer is not considered to pose a risk to the environment based on its reported use pattern.

RECOMMENDATIONS*Control Measures***Occupational Health and Safety**

- No specific engineering controls, work practices or personal protective equipment are required for the safe use of the notified polymer itself, however, these should be selected on the basis of all ingredients in the formulation.

Guidance in selection of personal protective equipment can be obtained from Australian, Australian/New Zealand or other approved standards.

- A copy of the MSDS should be easily accessible to employees.
- Personal protective equipment required during reformulation of the Bester 817 product are:
 - Eye protection (safety glasses or goggles)
 - Impermeable gloves
 - Industrial clothing and footwear
- If products and mixtures containing the notified polymer are classified as hazardous to health in accordance with the NOHSC *Approved Criteria for Classifying Hazardous Substances*, workplace practices and control procedures consistent with provisions of State and Territory hazardous substances legislation must be in operation.

Environment

- The following control measures should be implemented by the notifier to minimise environmental exposure during formulation of the notified polymer:
 - Bunding

Disposal

- The notified polymer should be disposed of to landfill or incinerated.
- Empty containers should be sent to local recycling or waste disposal facilities.

Emergency procedures

- Spills/release of the notified polymer should be handled by absorbing with sand and put into suitable container for disposal. Contaminated containers can be re-used after cleaning.
- The notified polymer should not be allowed to enter drains or waterways.

Storage

- If products and mixtures containing the notified polymer are classified dangerous goods, dangerous goods storage requirements may apply.

Transport and Packaging

If products and mixtures containing the notified polymer are classified dangerous goods, dangerous goods transport and packaging requirements may apply.

Secondary Notification

The Director of Chemicals Notification and Assessment must be notified in writing within 28 days by the notifier, other importer or manufacturer:

Under subsection 64(1) of the Act; if

- the notified polymer is introduced in a chemical form that does not meet the PLC criteria.

or

Under subsection 64(2) of the Act:

- if any of the circumstances listed in the subsection arise.

The Director will then decide whether secondary notification is required.

35 ACCESS TO FULL PUBLIC REPORT

NICNAS publishes a Full Public Report for each new chemical assessed. These reports are available for public inspection at the library of the Australian Safety & Compensation Council (ASCC) at their Canberra office by appointment only. Please call the library on (02) 6121 9260s to arrange to view the Full Public Report.

Reports can also be viewed and downloaded free of charge from our website at www.nicnas.gov.au. Copies of these reports may also be requested, free of charge, by contacting the Administration Section of NICNAS by phone: (02) 8577 8816 or fax: (02) 8577 8888.

36 LOW VOLUME CATEGORY PERMITS

The permits listed in Table 1 were issued to import or manufacture the following chemicals under section 21U of the *Industrial Chemicals (Notification and Assessment) Act 1989*. Low Volume Category Permits are approved for 36 months.

Table 1
Low Volume Category Permits

PERMIT NUMBER	COMPANY NAME	COMPANY POSTCODE	CHEMICAL OR TRADE NAME	HAZARDOUS SUBSTANCE	USE	DATE
699	La Biothetique Aust Pty Ltd	2018	Polysilicone-15	No	UV filter for hair care products	25.10.05
700	Luxury Beauty Concepts Pty Ltd	3182				
701	ZF Boge Elastmetall Australia Pty Ltd	3172	SI 264	Yes	Component of rubber shoe soles	27.10.05
702	3M Aust Pty Ltd	2073	3M Screen Print Gloss Clear 1920DR	No	Printing	18.11.05

37 COMMERCIAL EVALUATION CATEGORY PERMIT

The permits listed in Table 2 were issued to import or manufacture the following chemicals for commercial evaluation under section 21G of the *Industrial Chemicals (Notification and Assessment) Act 1989*.

Table 2
Commercial Evaluation Category Permits

PERMIT NUMBER	COMPANY NAME	COMPANY POSTCODE	CHEMICAL OR TRADE NAME	HAZARDOUS SUBSTANCE	QUANTITY	USE	PERIOD APPROVED
628	Rheochem Ltd	6163	GEOVIS	No	4000 kg	Drilling Fluid Additive	1 year
629	Ciba Specialty Chemicals Pty Ltd	3074	CHEMICAL A IN IRGASTAB PUR68	No	500 kg	Polyurethane foam stabiliser	2 years
630	Ciba Specialty Chemicals Pty Ltd	3074	CHEMICAL B IN IRGASTAB PUR68	No	500 kg	Polyurethane foam stabiliser	2 years
631	Ciba Specialty Chemicals Pty Ltd	3074	TERATOP RED HL-R	Yes	1500 kg	Textile dye	2 years

38 EARLY INTRODUCTION PERMITS FOR NON-HAZARDOUS INDUSTRIAL CHEMICALS

The permits listed in Table 3 were issued to import or manufacture the following chemicals prior to the issue of their respective assessment certificates under section 30A of the Act.

Table 3

Early Introduction Permits

PERMIT NUMBER	COMPANY NAME	CHEMICAL OR TRADE NAME	USE
403	Akzo Nobel Pty Ltd	Polymer in RX 3657	Component of OEM automotive component
404	BASF Coatings Australia Pty Ltd		
405	Rhodia Australia Pty Ltd	Polymer in Mirapol WT	Levelling agent for metal electroplating
406	International Sales & Marketing Pty Ltd	Polymer in Tego Antifoam MR465 & Polymer in Tego Antifoam MR467	Antifoam additive for non-aqueous media
407	Lubrizol International Inc		
408	Afton Chemical Asia Pacific Company		
409	International Sales & Marketing Pty Ltd	Polymer in Tegomer C-Si-2343	Leather processing
410	Lubrizol International Inc	Z-65	Cosmetics
411	PPG Industries Australia Pty Ltd	Polymer in ZD-318	Automotive paint additive

412	Nuplex Industries (Australia) Pty Ltd		
413	BASF Coatings Australia Pty Ltd	Polymer in Setalux 1903BA-75	Component of solvent based paint used in the automotive industry

39 NOTICE OF CHEMICALS ELIGIBLE FOR LISTING ON THE AUSTRALIAN INVENTORY OF CHEMICAL SUBSTANCES FIVE YEARS AFTER ISSUING OF ASSESSMENT CERTIFICATES

Notice is given in accordance with section 14(1) of the *Industrial Chemicals (Notification and Assessment) Act 1989*, that the following chemicals have been added to the Australian Inventory of Chemical Substances.

Table 4

Chemicals Eligible for Listing on the Australian Inventory of Chemical Substances

CHEMICAL NAME	CAS NUMBER	MOLECULAR FORMULA
imidazo[4,5-d]imidazole-2,5(1H,3H)-dione, tetrahydro-1,3,4,6-tetrakis(methoxymethyl)-, polymer with .alpha.-hydro-.omega.-hydroxypoly(oxy-1,2-ethanediyl), reaction products with polyethylene glycol mono[4-(1,1,3,3-tetramethylbutyl)phenyl] ether	865596-62-9	Unspecified
1-Dodecanesulfonamide, N-(4-methylphenyl)-	17417-32-2	C ₁₉ H ₃₃ NO ₂ S
benzene, ethenyl-, polymer with ethene and 1-propene	25608-79-1	(C ₈ H ₈ .C ₂ H ₄ .C ₃ H ₆) _n
2-butanone-O,O',O" (phenylsilyldiyl)trioxime	34036-80-1	C ₁₈ H ₂₉ N ₃ O ₃ Si
phenol, polymer with formaldehyde, glycidyl ether, polymers with [(methylphenoxy)methyl]oxirane and triethylenetetramine	99377-78-3	(C ₁₀ H ₁₂ O ₂ .C ₆ H ₁₈ N ₄ .C ₉ H ₁₀ O ₂ .CH ₂ O) _n
phosphoric trichloride, reaction products with bisphenol A and phenol	181028-79-5	Unspecified
2-propenoic acid, 2-methyl-, polymer with dodecyl 2-methyl-2-propenoate, ethenylbenzene, 2-ethylhexyl 2-propenoate, 2-hydroxyethyl 2-methyl-2-propenoate and alpha-(2-methyl-1-oxo-2-propenyl)-omega-(phosphonoxy) poly[oxy(methyl-1,2-ethanediyl)]	437992-86-4	(C ₈ H ₈) _a (C ₄ H ₆ O ₂) _b (C ₆ H ₁₀ O ₃) _c (C ₁₆ H ₃₀ O ₂) _d (C ₁₁ H ₂₀ O ₂) _e [C ₄ H ₅ O ₂ (C ₃ H ₆ O) ₅ -6PO ₃ H ₂] _f
2-propenoic acid, 2-methyl-3,3,4,4,5,5,6,6,7,7,8,8,9,9,10,10-heptafluorodecyl ester, polymer with methyl 2-methyl propenoate	93705-98-7	(C ₅ H ₈ O ₂) _x . (C ₁₄ H ₉ F ₁₇ O ₂) _y

40 NOTICE OF CHEMICALS ELIGIBLE FOR IMMEDIATE LISTING ON THE AUSTRALIAN INVENTORY OF CHEMICAL SUBSTANCES AFTER ISSUING OF ASSESSMENT CERTIFICATES

Notice is given in accordance with section 13B of the *Industrial Chemicals (Notification and Assessment) Act 1989*, that the following chemicals have been added to the Australian Inventory of Chemical Substances.

Table 5

Chemicals Eligible for Immediate Listing on the Australian Inventory of Chemical Substances

CHEMICAL NAME	CAS NUMBER	MOLECULAR FORMULA
Ascorbic acid, 2-O-alpha-D-glucopyranosyl-	129499-78-1	C ₁₂ H ₁₈ O ₁₁
1-Dodecanaminium, N,N-dimethyl-N-[3-[(2-methyl-1-oxo-2-propenyl)amino]propyl]-,chloride, polymer with N-[3-(dimethylamino)propyl]-2-methyl-2-propenamamide and 1-ethenyl-2-pyrrolidinone	306769-73-3	(C ₂₁ H ₄₃ N ₂ O.C ₉ H ₁₈ N ₂ O.C ₆ H ₉ N.O.Cl) _x
Cuprate(3-),[8-(hydroxy-kappaO)-7-[[2-[[2-(hydroxy-kappaO)-5-[(2-hydroxyethyl)sulfonyl]phenyl]azo-kappaN1]-1,3,6-	749887-18-1	Unspecified
1,4-benzenediamine, N,N'-mixed phenyl and tolyl and xylyl derivatives	68953-83-3	Unspecified
poly[oxy(methyl-1,2-ethanediyl)],alpha,alpha',alpha"-1,2,3-propanetriyltris[omega-[3-(dimethoxymethylsilyl)propoxy]-]	151865-59-7	(C ₃ H ₅)[(C ₃ H ₆ O) _n (C ₆ H ₁₅ O ₃ Si)] ₃
poly[oxy(methyl-1,2-ethanediyl)],alpha-[3-(dimethoxymethylsilyl)propyl]-omega-[3-(dimethoxymethylsilyl)propoxy]-	75009-88-0	(C ₆ H ₁₅ O ₃ Si)O(C ₃ H ₆ O) _n (C ₆ H ₁₅ O ₃ Si)
