

**NATIONAL INDUSTRIAL CHEMICALS NOTIFICATION AND ASSESSMENT SCHEME  
(NICNAS)**

**POLYMER OF LOW CONCERN PUBLIC REPORT**

**Polymer in CP 8327**

This Self Assessment has been compiled by the applicant and adopted by NICNAS in accordance with the provisions of the Industrial Chemicals (Notification and Assessment) Act 1989 (the Act) and Regulations. This legislation is an Act of the Commonwealth of Australia. The National Industrial Chemicals Notification and Assessment Scheme (NICNAS), administered by the Department of Health and the Department of the Environment and Energy, has screened this assessment report. The data supporting this assessment will be subject to audit by NICNAS.

This Public Report is available for viewing and downloading from the NICNAS website or available on request, free of charge, by contacting NICNAS. For requests and enquiries please contact the NICNAS Administration Coordinator at:

Street Address: Level 7, 260 Elizabeth Street, SURRY HILLS NSW 2010, AUSTRALIA.  
 Postal Address: GPO Box 58, SYDNEY NSW 2001, AUSTRALIA.  
 TEL: + 61 2 8577 8800  
 FAX: + 61 2 8577 8888

**SUMMARY:**

The following details will be published in the NICNAS *Chemical Gazette*:

| ASSESSMENT REFERENCE | APPLICANT(S)                | CHEMICAL OR TRADE NAME | HAZARDOUS SUBSTANCE | INTRODUCTION VOLUME    | USE                         |
|----------------------|-----------------------------|------------------------|---------------------|------------------------|-----------------------------|
| SAPLC/209            | Total Oil Australia Pty Ltd | Polymer in CP 8327     | No                  | ≤ 300 tonnes per annum | Component of fuel additives |

**CONCLUSIONS AND REGULATORY OBLIGATIONS****Human Health Risk Assessment**

Based on the assumed low hazard and the assessed use pattern, the notified polymer is not considered to pose an unreasonable risk to the health of workers and the public.

**Environmental Risk Assessment**

Based on the assumed low hazard and the assessed use pattern, the notified polymer is not considered to pose an unreasonable risk to the environment.

**Health and Safety Recommendations**

- No specific engineering controls, work practices or personal protective equipment are required for the safe use of the notified polymer itself. However, these should be selected on the basis of all ingredients in the formulation.

Guidance in the selection of personal equipment can be obtained from Australian, Australian/New Zealand or other approved standards.

- A copy of the SDS should be easily accessible to employees.
- If products and mixtures containing the notified polymer are classified as hazardous to health in accordance with the *Globally Harmonised System of Classification and Labelling of Chemicals (GHS)*, as adopted for industrial chemicals in Australia, workplace practices and control procedures consistent with provisions of State and Territory hazardous substances legislation should be in operation.

**Disposal**

- Where reuse or recycling are not appropriate, dispose of the notified polymer in an environmentally sound manner in accordance with relevant Commonwealth, state, territory and local government legislation.

**Emergency Procedures**

- Spills and/or accidental release of the notified polymer should be handled by physical containment, collection and subsequent safe disposal.

**Secondary Notification**

This risk assessment is based on the information available at the time of notification. The Director may call for the reassessment of the polymer under secondary notification provisions based on changes in certain circumstances. Under Section 64 of the *Industrial Chemicals (Notification and Assessment) Act (1989)* the notifier, as well as any other importer or manufacturer of the notified

polymer, have post-assessment regulatory obligations to notify NICNAS when any of these circumstances change. These obligations apply even when the notified polymer is listed on the Australian Inventory of Chemical Substances (AICS).

Therefore, the Director of NICNAS must be notified in writing within 28 days by the notifier, other importer or manufacturer:

- (1) Under Section 64(1) of the Act; if
  - the notified polymer is introduced in a chemical form that does not meet the PLC criteria;

or

- (2) Under Section 64(2) of the Act; if
  - the function or use of the notified polymer has changed from component of fuel additives, or is likely to change significantly;
  - the amount of notified polymer being introduced has increased, or is likely to increase, significantly;
  - the notified polymer has begun to be manufactured in Australia;
  - additional information has become available to the person as to an adverse effect of the notified polymer on occupational health and safety, public health, or the environment.

The Director will then decide whether a reassessment (i.e. a secondary notification and assessment) is required.

**Safety Data Sheet**

The SDS of the product containing the notified polymer was provided by the applicant. The accuracy of the information on the SDS remains the responsibility of the applicant.

## ASSESSMENT DETAILS

### 1. APPLICANT AND NOTIFICATION DETAILS

#### Applicants

Total Oil Australia Pty Ltd (ABN: 15 149 501 922)  
L1/415 Riversdale Road  
HAWTHORN EAST VIC 3123

#### Exempt Information (Section 75 of the Act)

Data items and details claimed exempt from publication: chemical name, molecular and structural formulae, molecular weight, polymer constituents, and residual monomers/impurities.

### 2. IDENTITY OF POLYMER

#### Marketing Name(s)

CP 8327 (product containing the notified polymer at 30 – 50%)  
CP 9032 and CP 9302 (products containing the notified polymer at 5%)  
CP 10632 (product containing the notified polymer at 4%)  
CP 10632 D (product containing the notified polymer at 3.5%)  
CP7249, CP 7500 (product containing the notified polymer at 1.5%)  
TACS CFI 2212, TACS CFI 2211 L, CP 7194 D, CP 7249 D, CP 7249 L, CP 7249 DL, CP 7500 D,  
CP 7500 DL and CP 10234 (products containing the notified polymer at  $\approx$  1%)  
CP 7194 and CP 7500 L (products containing the notified polymer at  $\leq$  1%)

#### Molecular Weight

Number Average Molecular Weight (Mn) is  $>$  1,000 g/mol.

### 3. PLC CRITERIA JUSTIFICATION

| <i>Criterion</i>                                       | <i>Criterion met</i> |
|--|----------------------|
| Molecular Weight Requirements                          | Yes                  |
| Functional Group Equivalent Weight (FGEW) Requirements | Yes                  |
| Low Charge Density                                     | Yes                  |
| Approved Elements Only                                 | Yes                  |
| Stable Under Normal Conditions of Use                  | Yes                  |
| Not Water Absorbing                                    | Yes                  |
| Not a Hazard Substance or Dangerous Good               | Yes                  |

The notified polymer meets the PLC criteria.

### 4. PHYSICAL AND CHEMICAL PROPERTIES

|                                   |  |
|-----------------------------------|--|
| Appearance at 20 °C and 101.3 kPa | Solid  |
| Glass Transition Temp             | Not determined                               |
| Density                           | 903 kg/m <sup>3</sup> at 15 °C               |
| Water Solubility                  | Predicted to be insoluble in water           |
| Reactivity                        | Stable under normal environmental conditions |
| Degradation Products              | None under normal conditions of use          |

## 5. INTRODUCTION AND USE INFORMATION

### Maximum Introduction Volume of Notified Chemical (100%) Over Next 5 Years

| Year   | 1   | 2   | 3   | 4   | 5   |
|--------|-----|-----|-----|-----|-----|
| Tonnes | 100 | 100 | 200 | 200 | 300 |

#### Use

The notified polymer will not be manufactured in Australia. It will be imported in a solution at  $\leq 50\%$  concentration, blended with various other ingredients and used as a fuel's cold flow improver additive at  $\leq 0.005\%$  in refinery or fuel depot in a closed system in industrial settings only.

## 6. HUMAN HEALTH RISK ASSESSMENT

No toxicological data were available. The notified polymer meets the PLC criteria and can therefore be considered to be of low hazard.

The risk of the notified polymer to occupational and public health is not considered to be unreasonable given the assumed low hazard and the assessed use pattern.

Although not considered in this risk assessment, the notified polymer contains residual monomers that are classified as hazardous according to the *Globally Harmonised System of Classification and Labelling of Chemicals (GHS)*, as adopted for industrial chemicals in Australia. These are not present in the notified polymer as introduced above the cut off concentrations for classification.

## 7. ENVIRONMENTAL RISK ASSESSMENT

### 7.1. Exposure Assessment

#### ENVIRONMENTAL RELEASE

Environmental release of the notified polymer is not expected during importation, storage and manipulation. Spillage during a transport or manipulation accident is the most likely reason for environmental release. Accidental spills and leaks during transportations and blending of the product into fuels will be contained and collected using an absorbent, non-flammable material. The collected polymer is to be disposed of via landfill.

When used as an additive in fuel, the majority of the notified polymer will be consumed during the combustion of the fuel by vehicles or machinery.

Waste water from the cleaning of the import containers and storage vessels is expected to be collected by an approved waste management company to be disposed of to landfill in accordance with local government regulations. Release of the notified polymer to surface water is expected to be negligible.

#### ENVIRONMENTAL FATE

No environmental fate data were submitted. Most of the notified polymer will be consumed and thermally decomposed during use. The notified polymer is not expected to be readily biodegradable and is not expected to be bioaccumulate. The notified polymer is not water soluble.

### 7.2. Environmental Hazard Characterisation

No ecotoxicological data were submitted. PLCs without significant ionic functionality are of low concern to the aquatic environment.

### **7.3. Environmental Risk Assessment**

When used as intended, the notified polymer will be combusted and will have limited potential for aquatic release. As such, the notified polymer is unlikely to reach concentrations of eco-toxicological concern. Therefore, based on its proposed use pattern, the notified polymer is not considered to pose an unreasonable risk to the environment.
